Description: Database that collects and provides all known physical microbial interactions. Currently, 24,295 experimentally determined interactions among proteins of 250 bacterial species/strains can be browsed and downloaded. These microbial interactions have been manually curated from the literature or imported from other databases (IntAct, DIP, BIND, MINT) and are linked to 26,578 experimental evidences (PubMed ID, PSI-MI methods). In contrast to these databases, interactions in MPIDB are further supported by 68,346 additional evidences based on interaction conservation, co-purification, and 3D domain contacts (iPfam, 3did). (spoke/matrix) binary interactions inferred from pull-down experiments are not included.

Abbreviations: MPIDB

Synonyms: Microbial Protein Interaction Database, The Microbial Protein Interaction Database

Resource Type: data or information resource, database

Defining Citation: PMID:18556668

Keywords: 3d domain, conservation, co-purification, interaction, microbial, protein, microbial interaction, protein interaction, interaction conservation, interaction co-purification, 3d domain contact, protein-protein interaction, microbial protein, microbiology

Funding Agency: J. Craig Venter Institute, Indgen Life Technologies, NIH, NIMH
Resource Name: MPIDB
Resource ID: SCR_001898
Alternate IDs: nif-0000-10467
Alternate URLs: http://jcvi.org/mpidb/

Ratings and Alerts

No rating or validation information has been found for MPIDB.
No alerts have been found for MPIDB.
