Proper Citation: Lamont-Doherty Core Repository (RRID:SCR_002216)
**Description:** Core repository and one of the world's most unique and important collections of scientific samples from the deep sea. Sediment cores from every major ocean and sea are archived at the Core Repository. The collection contains approximately 72,000 meters of core composed of 9,700 piston cores; 7,000 trigger weight cores; and 2,000 other cores such as box, kasten, and large diameter gravity cores. They also hold 4,000 dredge and grab samples, including a large collection of manganese nodules, many of which were recovered by submersibles. Over 100,000 residues are stored and are available for sampling where core material is expended. In addition to physical samples, a database of the Lamont core collection has been maintained for nearly 50 years and contains information on the geographic location of each collection site, core length, mineralogy and paleontology, lithology, and structure, and more recently, the full text of megascopic descriptions. Samples from cores and dredges, as well as descriptions of cores and dredges (including digital images and other cruise information), are provided to scientific investigators upon request. Materials for educational purposes and museum displays may also be made available in limited quantities when requests are adequately justified. Various services and data analyses, including core archiving, carbonate analyses, grain size analyses, and RGB line scan imaging, GRAPE, P-wave velocity and magnetic susceptibility runs, can also be provided at cost. The Repository operates a number of labs and instruments dedicated to making fundamental measurements on material entering the repository including several non-destructive methods. Instruments for conducting and/or assisting with analyses of deep-sea sediments include a GeoTek Multi-Sensor Core Logger, a UIC coulometer, a Micromeritics sedigraph, Vane Shear, X-radiograph, Sonic Sifter, freeze dryer, as well as a variety of microscopes, sieves, and sampling tools. They also make these instruments available to the scientific community for conducting analyses of deep-sea sediments. If you are interested in borrowing any field equipment, please contact the Repository Curator.

**Abbreviations:** LDEO-DSSR, LDCR

**Synonyms:** LDEO Core Repository, LDEO-Deep Sea Sample Repository, Lamont-Doherty Earth Observatory

**Resource Type:** core facility, service resource, access service resource

**Keywords:** deep sea, sediment, ocean, sea, geoscience, metadata

**Funding Agency:** NSF, Lamont-Doherty Earth Observatory

**Availability:** Public, To scientific investigators, The community can contribute to this resource

**Resource Name:** Lamont-Doherty Core Repository

**Resource ID:** SCR_002216

**Alternate IDs:** nlx_154738, DOI:10.26022, DOI:10.17616/R3PV10

Ratings and Alerts

No rating or validation information has been found for Lamont-Doherty Core Repository.
No alerts have been found for Lamont-Doherty Core Repository.
