Description: THIS RESOURCE IS NO LONGER IN SERVICE. Documented on January 5, 2023. A software toolkit to code document sets with ontologies or to enrich existing ontologies with new concepts from the document set. It contains algorithms for Named Entity Recognition, Co-reference resolution, concept discovery, discourse reasoning and attribute value extraction. The project aimed to develop a toolkit that will provide the following functionality: * Build text processing pipelines that use ontologies to annotate documents. * Enrich ontologies with new concepts that are automatically discovered in documents. * Populate an information model automatically from information extracted from documents. ODIE is open source software released under the LGPL v3.0 License. ODIE is written in Java and uses the Eclipse RCP Framework for the UI. The source code is organized into Eclipse projects.

Abbreviations: ODIE

Synonyms: ODIE - Ontology Enrichment & Information Extraction

Resource Type: source code, software resource, software toolkit

Keywords: ontology, annotation, named entity recognition, java, ontology enrichment, information extraction, natural language processing

Availability: THIS RESOURCE IS NO LONGER IN SERVICE

Resource Name: Ontology Development and Information Extraction
**Resource ID:** SCR_003405

**Alternate IDs:** nif-0000-33009
