Description: Subsidiary of Eli Lilly and Company who develops new molecular imaging agents capable of changing the medical management of significant, chronic human diseases by identifying the first stages of pathological change, potentially assisting in earlier diagnosis, and better management and development of new therapies. The company has developed a radioactive tracer called florbetapir (18F). Florbetapir can be used to detect beta amyloid plaques in patients with memory problems using positron emission tomography (PET) scans, making the company the first to bring to market an FDA-approved method that can directly detect this hallmark pathology of Alzheimer's disease.

Synonyms: Avid Radiopharmaceuticals Inc.

Resource Type: commercial organization

Keywords: molecular imaging agent, beta amyloid plaque, pet

Related Condition: Alzheimer's disease

Resource Name: Avid Radiopharmaceuticals

Resource ID: SCR_003786

Alternate IDs: nlx_158076
