Proper Citation: Yeast Search for Transcriptional Regulators And Consensus Tracking
(RRID:SCR_006076)

Description: A curated repository of more than 206000 regulatory associations between transcription factors (TF) and target genes in *Saccharomyces cerevisiae*, based on more than 1300 bibliographic references. It also includes the description of 326 specific DNA binding sites shared among 113 characterized TFs. Further information about each Yeast gene has been extracted from the *Saccharomyces* Genome Database (SGD). For each gene the associated Gene Ontology (GO) terms and their hierarchy in GO was obtained from the GO consortium. Currently, YEASTRACT maintains a total of 7130 terms from GO. The nucleotide sequences of the promoter and coding regions for Yeast genes were obtained from Regulatory Sequence Analysis Tools (RSAT). All the information in YEASTRACT is updated regularly to match the latest data from SGD, GO consortium, RSA Tools and recent literature on yeast regulatory networks. YEASTRACT includes DISCOVERER, a set of tools that can be used to identify complex motifs found to be over-represented in the promoter regions of co-regulated genes. DISCOVERER is based on the MUSA algorithm. These algorithms take as input a list of genes and identify over-represented motifs, which can then be compared with transcription factor binding sites described in the YEASTRACT database.

Abbreviations: YEASTRACT

Resource Type: data or information resource, database

Defining Citation: [PMID:24170807](#), [PMID:20972212](#), [PMID:18032429](#), [PMID:16381908](#)

Keywords: yeast, gene, regulatory association, transcription factor, target gene, genomic, transcription regulation, transcription, web service, bio.tools, FASEB list
