Description: Global registry of research data repositories from all academic disciplines that allows the easy identification of appropriate research data repositories, both for data producers and users. Information icons display principal attributes of a repository that can be used for multi-faceted searches. Repository operators can suggest their infrastructures to be listed via a simple application form. A repository is indexed when the minimum requirements are met, i.e. mode of access to the data and repository, as well as the terms of use.

Abbreviations: re3data.org

Synonyms: Registry of Research Data Repositories, re3data.org: Registry of Research Data Repositories, re3data

Resource Type: data or information resource, database, registry

Keywords: vocabulary, registry, metadata standard, data sharing, FASEB list

Funding: DFG
