Proper Citation: Forsyth Mineralized Tissue Analysis Core Facility (RRID:SCR_009791)

Description: Characterization of mineralized tissues, natural or synthetic, is a challenging task, since these materials are comprised of organic and mineral constituents, each with strikingly different physical and chemical properties. The function of the Forsyth Mineralized Tissue Analysis (MTA) Core is to provide a comprehensive structural, physical, and chemical analysis of wild type, mutant and engineered mineralized tissues, including teeth (enamel, dentin, cementum), cartilage and bone. The strengths of the MTA Core include a unique combination of specialized instrumentation, techniques, and expertise based on more than 30 years of experience in this field.

Resource Type: service resource, core facility, access service resource

Resource Name: Forsyth Mineralized Tissue Analysis Core Facility

Resource ID: SCR_009791

Alternate IDs: nlx_156258

Alternate URLs: <http://www.forsyth.org/research/services.html>

Record Creation Time: 20220129T080254+0000

Record Last Update: 20260807T042721+0000

Ratings and Alerts

No rating or validation information has been found for Forsyth Mineralized Tissue Analysis Core Facility.

No alerts have been found for Forsyth Mineralized Tissue Analysis Core Facility.
