Description: Core facility that provides the following services: Statistical design and analysis. Applied statistical methodologies and data analysis techniques are critical undergirding factors in research and knowledge advancement. Appropriate experimental design lays foundation of sound research plans; sample size determines the power of significance and efficient utilization of scarce resources; and adequate data analysis generate results that are valid and true representative of the population in question. The Biostatistical Support Unit (BSU) provides statistical services and research support to RCMI investigators, other faculty, as well as to graduate and undergraduate students.
