Proper Citation: Functional Mixed Processes Models (RRID:SCR_014187)

Description: A tool which implements a functional analysis pipeline for the joint analysis of longitudinally measured functional data and clinical data (for example age, gender and disease status). FMPM consists of a functional mixed effects model for characterizing the association of functional response with covariates of interest by incorporating complex spatial–temporal correlation structure, an efficient method for spatially smoothing varying coefficient functions, an estimation method for estimating the spatial– temporal correlation structure, a test procedure with local and global test statistics for testing hypotheses of interest associated with functional response, and a simultaneous confidence band for quantifying the uncertainty in the estimated coefficient functions.

Abbreviations: FMPM

Resource Type: data analysis software, data processing software, software application, software resource, workflow software

Keywords: workflow software, data analysis software, analysis pipeline, longitudinal, functional data, clinical data

Availability: Public, Available to the research community

Resource Name: Functional Mixed Processes Models

Resource ID: SCR_014187

License: NIH Data Access Policy

Record Creation Time: 20220129T080319+0000

Record Last Update: 20260912T195813+0000

Ratings and Alerts

No rating or validation information has been found for Functional Mixed Processes Models.

No alerts have been found for Functional Mixed Processes Models.
