Proper Citation: Scripps Research Institute - Florida X ray Crystallography Core Facility
(RRID:SCR_017835)

Description: Core provides equipment and resources for crystallographic analysis of target macromolecules and small inorganic or organic molecules. Performs crystallization, X-ray diffraction data collection (both in-house and synchrotron sources) processing, phasing, crystallographic refinement, model building, and visualization. Structural data provide information including biological functions, 3D-folding, ligand binding (small molecule or protein), or mutational effect of target macromolecules. Services include Crystallization Screening; Data Collection Service: Diffraction experiments will be performed at in-house X-ray facility as well as synchrotron beam lines; Structure Determination and Analysis: complete data set collected at home or synchrotron will be processed for inorganic, organic, protein or nucleic acid structure determination, model building and crystallographic refinement. Other Structural Biology Related Services: core facility offers thorough analysis of macromolecular structure for publication or grant applications, also provides computational experiments such as homology modeling and in silico ligand docking.

Synonyms: Macromolecular X-ray Crystallography Core facility
