Proper Citation: University of Pittsburgh Genome Editing, Transgenic and Virus Core Facility (RRID:SCR_025151)

Description: Core provides technical expertise, advice, and training and is comprised of three functional sections: Molecular cloning (plasmid, virus, CRISPR/Cas9); Viral vectors (lentivirus, adenovirus, adeno-associated virus); Animal services (transgenic, knockout, cryopreservation, re-derivation, and more). Services offered include Assistance for generating recombinant plasmids; Design and implementation of CRISPR/Cas9 technology for in vivo and in vitro work; Mouse and rat transgenesis, including transgenic and knockout/knockdown techniques using pronuclear injection, ES cell injection/chimera, and CRISPR/Cas9-mediated genome editing; Production of lentivirus, adenovirus, and adeno-associated virus vectors; Additional animal testing and procedures: teratoma and chimera testing to validate putative pluripotent stem cell lines, cryopreserve or re-derive of valuable transgenic lines (sperm or embryos).
