Description: System composed of DNBSeg PE150 sequencing platform for RNA sequencing transcriptome with BGISEQ-500 desktop sequencer which uses DNA nanoball and combinational probe anchor synthesis developed from Complete Genomics sequencing technologies to generate short reads at large scale. DNBSeg PE150 sequencing platform uses DNA nanoballs that are loaded onto flow cells and then read using fluorescent probes. The platform then uses lasers to excite the probes and take millions of images to identify bases.
