Description: Facility is outfitted with the Aquatic Habitats for Accelerated Bioresearch (AHAB) fish rearing system (Aquatic Habitats, Apopka, FL). This system is composed of five-foot wide, five-level, stainless steel racks using any combination of tank sizes (3 and 10 liter). Water input lines deliver UV-sterilized water to each tank through an independent valve. The fish tanks have self-cleaning bottoms and the effluent system features an optically clear design. The filter system requires minimal maintenance, and maintains high water quality, dramatically reduced disease and mortality.
