Description: Specialized facility dedicated to supporting research, diagnostics, and scientific development through advanced microscopy, functional imaging, and image analysis techniques. Provides imaging systems including fluorescence microscopes, whole-slide scanners, confocal and super-resolution microscopes in both upright and inverted configurations, light-sheet microscopy, miniscopes, and multiphoton systems optimized for in vivo and ex vivo imaging. Provides a specialized whole-sample clearing service covering the complete workflow, from tissue preparation to image acquisition and subsequent digital processing. For image analysis and quantification, users have access to established commercial software packages, including Imaris and Arivis. Provides workstation equipped with open-source libraries and applications, such as Cellpose, StarDist and Napari. Images and associated metadata can also be generated in formats fully compatible with the OMERO data management platform. Staff provide expertise, training and technical support.
