Description: Rattus norvegicus with name SD-Tg(CAG-EGFP)63Mcwi from RGD.

Species: Rattus norvegicus

Notes: This transgenic strain contains the enhanced green fluorescent protein gene driven by ubiquitous CAG promoter. This vector contains long terminal repeats with self-inactivating mutation, a central polypurine tract of HIV-1, a human cytomegalovirus and a composite intron from rabbit beta-globin. This transgenic strain was made by injecting the lentivirus vector containing the eGFP construct (lentiviral-CAG-eGFP) into SD rat embryos.

Catalog Number: 1642990

Background: transgenic
