Description: Rattus norvegicus with name LL from RGD.

Species: Rattus norvegicus

Notes: This the hypotensive strain established from the selective breeding In 1969. Outbred Sprague-Dawley rats were selected for systolic blood pressure trait using an indirect plethysmographic technique in pre-warmed unrestrained conscious rats. Three pairs were originally selected, and selection was continued with brother x sister mating. Strain LN was maintained as a normotensive control, and LH as a hypertensive strain. (see Vincent et al 1984, and Vincent and Sassard, 1994 for reviews). This LL is the parent to LL substrains maintained in other institutions.

Catalog Number: 405878049

Background: inbred

Database: Rat Genome Database (RGD)

Database Abbreviation: RGD

Availability: Unknown

Alternate IDs: 405878049

Organism Name: LL

Record Creation Time: 20240716T195800+0000

Record Last Update: 20260808T193751+0000
