Description: Tetrahymena thermophila with name CU428/fsNEO from TSC.

Species: Tetrahymena thermophila

Notes: NEO coding sequence with two frameshift mutations in RPL29 vector (conferring resistance to Cyclohexamide, but remaining sensitive to paromomycin). The intention is this will provide the OLD MAC with a (defective) copy of the resistance gene, preventing its elimination in the NEW MAC after MIC transformation. From the Winey Lab at the University of Colorado Boulder.
