**Proper Citation:** Beijing: Eyes Open Eyes Closed Study (RRID:SCR\_001507)

**Description:** Data set of 48 healthy controls from a community (student) sample from Beijing Normal University in China with 3 resting state fMRI scans each. During the first scan participants were instructed to rest with their eyes closed. The second and third resting state scan were randomized between resting with eyes open versus eyes closed. In addition this dataset contains a 64-direction DTI scan for every participant. The following data are released for every participant: \* 6-minute resting state fMRI scan (R-fMRI) \* MPRAGE anatomical scan, defaced to protect patient confidentiality \* 64-direction diffusion tensor imaging scan (2mm isotropic) \* Demographic information and information on the counterbalancing of eyes open versus eyes closed.
