Proper Citation: Oregon Health and Science University Neuroscience Graduate Program
(RRID:SCR_003508)

Description: The Neuroscience Graduate Program (NGP) at OHSU provides outstanding, multidisciplinary training in neuroscience in one of the best-recognized neuroscience programs in the United States. Our graduates are distributed at top research institutions throughout the world, and the success of our faculty ensures that graduates have ready access to their next step be it postdoctoral fellowships in academia or industry, or other science-related careers. The program is particularly strong in cellular neuroscience, neuronal signaling, gene regulation, biophysics of channels and transporters, sensory systems, and neuroendocrinology with increasing strength in developmental neuroscience and disease-oriented neuroscience research. Faculty members are located within research institutes at OHSU including the Vollum Institute, the Oregon National Primate Research Center (ONPRC), Oregon Hearing Research Center, Jungers Center and the Center for Research on Occupational and Environmental Toxicology (CROET); as well as the basic and clinical departments in the OHSU School of Medicine. As time spent in the lab is the most important component of graduate science training, our program is designed such that core coursework is completed in the first year. During that first year, students also are immersed in research through lab rotations in several labs, eventually choosing one that gives a mutual fit. Because of the relatively small number of students compared to the number of neuroscience laboratories at OHSU, students have many options for a thesis lab. Our well funded faculty provide state-of-the-art exposure to the concepts and technology of modern neuroscience. OHSU also offers certificate and degree programs, e.g. technology transfer

and translational science, for advanced students in the NGP who want to broaden their career options.
