Description: Biomet and Interpore Cross are on the cutting edge of technology in the orthopedic biomaterials market. Our focus is developing and providing truly innovative products, which meet the rapidly expanding needs of orthopedic surgeons both today and in the future. Our Pro Osteon resorbable bone graft material is derived from an abundant non-decorative coral. Pro Osteon is available in a selection of fully resorbable sterile granules and blocks, in a variety of shapes and sizes. Our InterGro DBM products combine the osteoinductivity of DBM with a natural, non-soluble carrier that won't wash away, delivering a unique bone graft that offers superior handling and performance characteristics. This highly-moldable composite graft can be easily formed to fit any shape fracture or defect.

Abbreviations: Interpore Cross

Resource Type: biomaterial supply resource, material resource

Keywords: orthopedic, biomaterial, composite graft, bone graft material

Funding:

Resource Name: Interpore Cross International

Resource ID: SCR_004776

Alternate IDs: nlx_77350
