Proper Citation: National Academy of Sciences (RRID:SCR\_005123)

Description: The National Academy of Sciences (NAS) is a private, non-profit society of distinguished scholars engaged in scientific and engineering research, dedicated to the furtherance of science and technology and to their use for the public good. An Act of Congress, signed by President Abraham Lincoln in 1863 at the height of the Civil War, calls upon the NAS to provide independent advice to the government on matters related to science and technology. The National Research Council was created under the NAS charter in 1916 to extend the scope of the NAS in its advisory role. The National Academy of Engineering and the Institute of Medicine were organized under the NAS charter in 1964 and 1970, respectively. Since 1863, the nation"s leaders have turned to the National Academy of Sciences for advice on the scientific and technological issues that frequently affect policy decisions. Most of the institution's science policy and technical work is conducted by the National Research Council (NRC), which was created expressly for this purpose and which provides a public service by working outside the framework of government to ensure independent advice on matters of science, technology, and medicine. The NRC enlists the nation"s top scientists, engineers, and other experts, who volunteer their time to study specific issues. The reports that result from their deliberations have led to some of the most significant and lasting improvements in the health, education, and welfare of all Americans. The Academy"s service to government has become so essential that Congress and the White House have issued legislation and executive orders over the years that reaffirm its unique role. NAS Award in the Neurosciences - Established by the Fidia Research Foundation Awarded in recognition of extraordinary contributions to progress in the fields of neuroscience, including neurochemistry, neurophysiology, neuropharmacology, developmental neuroscience, neuroanatomy, and behavioral and clinical neuroscience. The award is given every three years and will be awarded again in 2013

#### Abbreviations: NAS

**Resource Type:** portal, data or information resource, knowledge environment, service resource, funding resource, topical portal

Keywords: science, technology, medicine, award

Funding:

**Resource Name:** National Academy of Sciences

Resource ID: SCR\_005123

Alternate IDs: nlx\_144131

Record Creation Time: 20220129T080228+0000

Record Last Update: 20250522T060227+0000

## **Ratings and Alerts**

No rating or validation information has been found for National Academy of Sciences.

No alerts have been found for National Academy of Sciences.
