Proper Citation: DFCI Flow Cytometry Core Facility (RRID:SCR_009751)

Description: Core facility that provides the following services: Cell Sorting.

The Flow Cytometry Core Facility provides sterile sorting and analysis of samples in support of research at DFCI. The core has 2 high-speed cell sorters, the BD FACSAria II SORP and BD FACSAria IIu with up to 12-color simultaneous detection utilizing multi-laser platforms. Sample populations can be sterile sorted into a variety of tubes or plates. The BD FACSAria II SORP and BD FACSAria IIu are both equipped with the Automated Cell Deposition Unit (ACDU) for sterile single cell sorting into 96, 384 micro titer plates. The core presently has 2 analyzers, the BD LSRFortessa SORP and BD LSR II with up to 12-color simultaneous detection utilizing multi-laser platforms. The BD LSR II is also equipped with an HTS (high throughput sampler) for analyzing samples directly from 96 well micro titer plates as well as being able to run 5ml tubes. The Facility staff is available to assist researchers with their sorting and analysis needs. Researchers who would like to utilize the analyzers are trained so that they can analyze their experiments independently. The staff will assist with data acquisition and analysis as well as interpretation. They will also assist in experiment design and implementation as well as troubleshooting. Training sessions are available for researchers who would like to run their sorting experiments independently.

Resource Type: core facility, service resource, access service resource

Keywords: cellular assay
