Proper Citation: UTEP Statistical Consulting Laboratory (RRID:SCR_010142)

Description: The long-term goal of the Statistical Consulting Laboratory (SCL) is to be a regional resource for the statistical support of basic science research, clinical or population based research, and evaluation of interventions designed to address issues of health and health disparities in the region's population. As a major component of the Border Biomedical Research Center (BBRC), the Statistical Consulting Lab will continue to serve as a focal point from which all BBRC participants may obtain statistical and computing support for both their research and for the education of students in the graduate programs of the Biological Sciences Department. Statistical support is provided by a Ph.D. level staff statistician and five resource statisticians (counting the SCL core director) in the Department of Mathematical Sciences.

Resource Type: core facility, service resource, access service resource
