### Resource Information

**URL:** <http://www.cybase.org.au/>

**Proper Citation:** Cybase (RRID:SCR\_012925)

**Description:** Cybase is dedicated to the study of a fascinating new class of proteins that possess a cyclic backbone in which the N and C termini have been joined with a conventional amide bond. These recently characterized molecules have now been found in organisms from all kingdoms of life and given the current rate of discovery the number of sequences could soon number in the hundreds. Research in our lab is aimed at further characterizing cyclic proteins and adapting them for commercial and medicinal use. In particular we work on a class of cyclic protein named the cyclotides. These proteins are found in the plants of the Rubiaceae and Violaceae and our specific goals include: determining the role that cyclotides play in plants, discovering the mechanism of action of the wide range of biological activities displayed by the cyclotides (including anti-HIV, anti-bacterial and insecticidal activity), characterising the genetics of the cyclotides and further discovery of novel cyclotides.

**Synonyms:** Cybase

**Resource Type:** database, data or information resource

**Keywords:** cyclic protein

**Funding:**

**Resource Name:** Cybase

**Resource ID:** SCR\_012925

**Alternate IDs:** nif-0000-02710

**Old URLs:** <http://research1t.imb.uq.edu.au/cybase/>

**Record Creation Time:** 20220129T080313+0000

**Record Last Update:** 20250412T055709+0000
