Proper Citation: GNU Octave (RRID:SCR_014398)

Description: A high-level language, primarily intended for numerical computations. It provides a convenient command line interface for solving linear and nonlinear problems numerically, and for performing other numerical experiments. It may also be used as a batch-oriented language. Octave has extensive tools for solving common numerical linear algebra problems, finding the roots of nonlinear equations, functions written in the Octave language, or by using dynamically loaded modules written in C, C++, Fortran, or other languages.

Synonyms: Octave

Resource Type: programming language, software resource

Defining Citation: DOI:10.1016/j.jprocont.2012.04.006

Keywords: command-line, free software, array programming, programming language, mathematics, reproducible research,

Availability: Free

Resource Name: GNU Octave

Resource ID: SCR_014398

Record Creation Time: 20220129T080320+0000
Ratings and Alerts

No rating or validation information has been found for GNU Octave.

No alerts have been found for GNU Octave.
