Description: Services include use of high throughput screening technology, compounds in various libraries, siRNA sets of druggable genome for mouse and human and database of results from screens. For compounds screens, data points are in singlets. For functional genomics screens we use duplicates. We typically utilize 384 well plates but are flexible in this regard. We can accommodate any plate type ranging from 96 to 1536 well plates. Specialty plates can be handled on needed base. We have special rates for consumables with many vendors based on volume we use. These reduced rates are passed on directly to our screeners.
