Description: Provides instrumentation and technical expertise to local researchers seeking to conduct MS-based protein or small molecule assays. Staff provide assistance with project design, sample preparation, collection and interpretation of mass spectrometric data. Common analyses services include identification of unknown proteins, characterization of protein complexes, mapping of post-translational modifications and relative quantitation of peptides and small molecules from range of sample types, including complex clinical matrices, tissue extracts and cell lysates. Specialized MS instrumentation include Fusion Lumos Tribrid Orbitrap and Thermo Q Exactive Plus Hybrid Quadrupole-Orbitrap. In addition, the laboratory has access to a variety of automated database searching software as well as resources to facilitate discovery-based proteomics projects.
